Thread: Opening the CSG List (1)
Keywords and Ideas: confirm

Dear Control Systems Group Member:

This is my first attempt to send a message to the email addresses I collected in Indiana, PA. Please let me know if you receive this.

The addressee list should be considered preliminary until I confirm that they work. I will do this after I give all addressees a week or so to respond.

If you know of other individuals with control theory interests who have email addresses, please let me know and I will add them to the network.

Messages for individual listed above should be sent to the above addresses (after confirmation of addresses). For the time being, messages for the entire group should be sent to me with a note to this effect and I will forward to all addressees. Eventually I hope to establish a separate email addresses which will automatically forward mail to the entire group.

This could be a lot of fun. I am controlling for better communication among CSG members.

Cheers--Gary

Subject: Re: CSG Network (CSGNet)
To: g-cziko@uiuc.edu
ID#: CT

I received your message and printed it for future, more extensive reply at a time when I have more time ((next week)).

I enjoyed our time together in Indiana (or was that Pennsylvania) and intend to continue the conversation about the work on the simulation of Crowd. I hope you will give Clark all the suggestions that you have to improve it.

More later. Chuck

Subject: confirmation

Gary. I received your note and list of e-mail addresses for CSTG members. I have also learned that I already have an internet address:
CMCPHAIL@vmd.cso.uiuc.edu

Perhaps you should add this to your list since I understand that we can only communicate on arpa by means of internet and hence with folks like Marken and Deacon. Let me know when your schedule opens up and we can "do" lunch. cheers.
Clark

Gary,

I received your message. You must be the one person I didn't introduce myself to. Good idea on the e-mail plan.

Regards,

Dennis Delprato

Gary,

I went back and looked at the addresses. Surely my message didn't get through using my name--did it.

My e-mail address seems to be DELPRATO@UM.CC.UMICH.EDU.

As I understand it, we are on BITNET & INTERNET, but I am a novice at e-mail--haven't found it sufficiently worth the effort yet. Hope this will change.

Subject: CONNECTION

Gary,

Your messages came through. I hope you also reached the others in The csg. Did you receive the copy of our manuscript that i sent Shortly after the meeting? I located a journal with a couple of people On the editorial board who have published (favorably) on c-s theory. Perhaps they will be more receptive to a revision of the manuscript Than were the people at science to the original. Perhaps you should confirm receipt of this message, so i can know If our new "mainframe" is fully functional. Before too much longer, Our networking will be done on a vax, then we will be fully compatible With the world.

:

Tom: Here is proof that your email message was received here.

Yesterday I received ms. yesterday and have already read it. It makes a very elegant case for control theory.

However, being quite new to CT, I might have a better appreciation than you do of the viewpoint of your reviewers. When I first read about tracking experiments I was not originally very impressed. "What does a simple tracking task have to do with real behavior in real situation?", I asked myself. It is only now that I see the point and how these simple tracking tasks are the simplest way of capturing the essence of real behavior in the real world.

So this may well be what you are up against. You may need to make more of a case for why tracking is important and how it relates to more interesting behaviors. In fact, a paper doing only that might be interesting in its own

right, but probably better if combined with the current manuscript. It could then serve bot as an introduction to CT and a demonstration of how CT is better than S-R and typical cognitive approaches to behavior.

Gary

I got it! I hope you get this return note.
I have not had time to do much since the meeting. I mean to write a little note for the newsletter. I should have time to do so by next week.
It was really nice to meet you at the meeting. Talk to you again soon.

Regards

Rick

Subject: Re: email address

Gary,

Typically mailers don't understand the same domain that they are in, so since you are also in the arpa domain leaving the .ARPA off was correct. I place the .ARPA on my address because most mailers will ignore it, and if your outside the arpa domain it is needed. However, that is neither here nor there, I did receive your mail and this is

my somewhat long winded reply.

Subject: RE SUGGESTIONS

GARY,
Thanks, for the confirmation that i am on the network -- with all
Of the changes in hardware around our campus, that is not a given.
Also, thanks for the comments and suggestions concerning the manuscript.
You are correct, in your impression that many readers "throw the
Switch" when they see a discussion of tracking experiments. Recently,
I received an invitation to submit an article on cst, with the
Specific content left to my discretion. Perhaps that would be a good
Opportunity for me to do something on "tracking" as a ubiquitous
Phenomenon. K.u. smith and his associates have done many things
Along that line, over several decades, but they never developed
A formal model of the phenomenon -- nor do they seem at all interested
In control theory.
did you receive replies from many of the others in the group?

Subject: Confirmation of Email Addresses
From: Gary Cziko

Dear CSG Devotees:

While I have not yet received confirmations from everyone on CSGNet, I was
able to iron out problems with all messages that were bounced back to me
because of invalid addresses. This was the case for Marken and Deacon
whose addresses you will see have now been modified.

I am working via Internet so it is possible that you may need slightly
different addresses depending on how you are connected. If you are a
Bitnet node, you will not need the .bitnet suffix for Bitnet addresses,
although it hopefully will not hurt. The .bitnet suffix should work most
Internet machines, although it is possible that certain systems will not
like it since it is not a strictly valid Internet address.

As I mentioned earlier, if you wish to send a message to the entire
network, just send it to me with a note to that effect and I will forward
it on. Fairly soon I hope to have a special address to which to send such
messages which will then be forwarded to all nodes automatically.

Please do confirm that you have received email from me if you have not yet
done so already.--Gary

Subject: Don Campbell & Hugh Petrie
From: Gary Cziko

I just occurred to me that I also have email addresses for both Don Campbell and Hugh Petrie and so they are now included in the list above.

Don Campbell apparently does read his email, but is not prone to use email himself for responding so it would probably be a good idea to include a geographic address to any messages to him requiring a response.

If either Don or Hugh would prefer not to be on the network, they should let me know. By remaining on the network, however, they are likely to better appreciate the impact of the book that Bill Powers dedicated to them in 1972.--Gary
